

Equipment (pictured)

- Sterile urine collection bag, provided.
- Sterile container, provided.
- Sterile water wipes, provided.

Safety Precautions

- Do not leave urine collection bag on infant longer than 2 hours as the urine and adhesive surface can cause skin irritation.
- Wash hand before and after use.

Instructions

1. Clean the infants' genital area with the sterile water wipes provided.
2. Allow the area to air dry.
3. The urine collection bag has an adhesive area. Without touching the inside of the urine bag, peel off this protective layer and place the opening of the bag over the infants' genital area. Press the adhesive area to the skin making sure there is good contact between the skin and adhesive area, to avoid leakage.
4. Gently peel the bag from the skin, holding the bag upright, once the urine has passed.
5. Empty the contents of the bag, by peeling away the little blue tab at the bottom of the bag, into the container provided and ensure the lid is screwed on firmly.
6. Write the Name, Date of Birth, Gender, along with the date and time collected on the container.
7. Return the sample and the request slip to the Pathology Collection rooms ASAP on the day of collection. Store the sample in the fridge if it cannot be returned to collection rooms immediately.
